CLEANING & CARE

UNIVERSAL TELESCOPIC BASIN BOTTLE TRAP

32 or 40mm

To maintain optimal performance and longevity, we recommend a thorough cleaning of the bottle trap every 2-3 months.

TO CLEAN THE BOTTLE TRAP IN THE EVENT OF A BLOCKAGE

Position a bucket beneath the trap to collect any water or debris.

Carefully unscrew the lower “bottle” section of the trap clockwise.

Remove any debris or obstruction from the interior.

Rinse the bottle section thoroughly with clean water.

Inspect the rubber seals for any signs of wear or damage.
Replace them if necessary to ensure a perfect seal.

Reassemble the trap, tightening securely to maintain a flawless fit.

CARE TIPS

After cleaning, gently wipe the trap dry to prevent residue buildup.

If drainage slows, inspect the trap for clogs before considering any other measures.

PLEASE AVOID

The use of harsh chemicals, which may compromise the integrity of the plastic components.
