Thank you for purchasing this Lusso Light Acrylic Freestanding Bath.

Please read this guide carefully before installing, using and cleaning this product, and retain it for future reference.

If you have any queries in relation to this product or guide, please contact our Customer Service team on 020 3370 4057.

PRODUCT KIT

- A** Freestanding Bath
- B** Flexible Drain Hose

BEFORE INSTALLATION

Prior to installation, please visit the product page of your chosen bath at Lusso.com, and download the technical specification - this will provide the exact dimensions of the design, and show the position of bath waste fitting.

Please note that the provided waste connector and flexible pipe are designed to fit within the void area of the bath and the base of the floor, and that the pipe has a 40mm diameter and extendable length of 850mm for installation purposes. The pipe is compatible with all British standard bath traps, however we recommend the use of a HEPVO waterless trap with an inline adapter, which can be purchased from all major plumbing centres and DIY stores. We also recommend that this bath is installed by a fully qualified plumber.

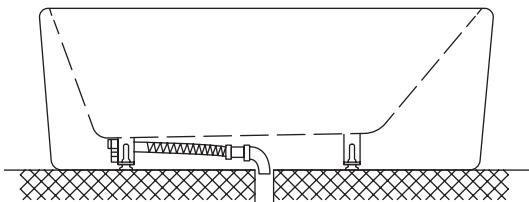

To avoid scratching the surface of the bath during installation, please ensure that it is covered with a soft material throughout the process.

Before you begin, you should also check that the floor at the installation site is level and offers sufficient support for the chosen bath design. Additionally, we advise that all water is switched off at the mains, the installation area is waterproofed, and that you carefully check all measurements and components before proceeding.

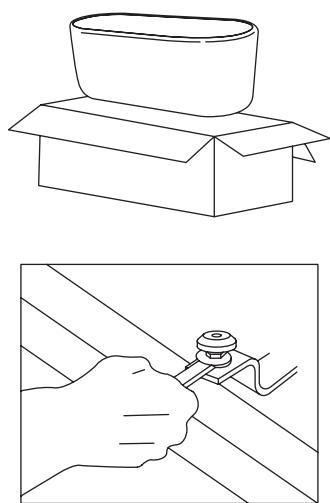

INSTALLATION STEPS

- 1** Determine the location of the drainpipe on the floor by taking measurements of the drain and waste location underneath the bath. Next, clean the drain hole area in preparation of setting the drain, and ensure that it's dry and free from debris before moving onto the following step.
- 2** After carefully removing the bath from its packaging, place it into position and carefully adjust the foot screws to ensure that the bath is level and water can be drained smoothly.
- 3** Place the provided flexible drain hose into the floor drain before sealing the connection between the parts with a PVC pipe sealant.
- 4** Once the pipework is complete, fill the bath with water to test that the installation is level and there are no leaks.
- 5** Ensuring that the bath is dry, apply silicone across the bottom of the bath to create an airtight seal, then apply a bead of bathtub and tile caulk around the edges of the bath base. Gently remove any excess silicone and caulk where the bathtub meets the floor.
- 6** Before using the bath, allow 24 hours for the adhesive material to set.
